

Poole Museum

POOLE, DORSET

"Greendale's willingness always to go the extra mile and their collaborative attitude were key to getting the project delivered as we wanted it."

Poole Museum

Greendale used a combination of modern and traditional building techniques during a substantial design and build project for this popular visitor attraction. All display floors of the Grade 2 listed warehouse were upgraded and a new feature area created to exhibit an Iron Age log boat.

After demolishing an unsightly structure dating from the 1970s, a new, contemporary steel and glass atrium entrance with observation deck was also created to welcome visitors to the museum.

Employer	Borough of Poole
Architects	Horden Cherry Lee
Surveyors	Baqus Denley King
Value	£950,000

Construction Notes

Careful consideration on Health & Safety matters were required on this project. In particular the demolition of the existing 1970's structure in a busy restricted urban area. External hard landscaping incorporated locally quarried Purbeck Stone slabs.
